

Part-time Product Manager Position

The international project ATLOMY is developing a groundbreaking high-end 3D interactive atlas mapping the human body from an historical perspective.

It is funded by the European Research Council and involves a unique multidisciplinary team from the fields of medicine, history, advanced 3D modelling and software development.

We are looking for a Product Manager to take us **from idea to realization**. We are based at The Hebrew University of Jerusalem, joining the team from day 1 will allow you to shape the product and working methods from an early stage.

Responsibilities

- Understanding and defining user requirements and use cases
- Planning and executing a thorough market and user research for additional commercial uses
- Compiling user experience guidelines
- Deriving technical requirements for the developers
- During development: working closely with the team to ensure the product requirements and goals are maintained, getting feedback from the users and applying them accordingly.

Skills

- Product Management experience
- Experience in defining new products
- Proven ability to conduct market researches
- Experience in relaying requirements to technical teams – a strong advantage
- Knowledge in UX concepts – a strong advantage
- Excellent written and verbal English skills - a must
- Excellent client-facing and internal communication skills - a must
- Positive and collaborative attitude - a must
- Experience related to: 3D design or the medical world - an advantage
